

Chapter 05

Attack Frameworks

Attack Frameworks

Break attacks into
recognizable phases

- Anticipate attacker's next moves

Structured lenses to
analyze progression

- Key topic on the CYSA+ exam

Cyber Kill Chain Overview

7-phase model by
Lockheed Martin

- Recon → Weaponize → Deliver →
Exploit → Install → C2 → Act

Maps attacker progress
toward objectives

- Helps defenders detect
and disrupt

Kill Chain: Phases 1–4

Reconnaissance: identify target and attack vectors

Weaponization: build payload for a known weakness

Delivery: transmit exploit to the target

Exploitation: execute code and begin the attack

Kill Chain: Phases 5–7

Installation: plant backdoor for persistence

C2: remotely control the compromised system

Actions on Objectives: exfiltrate or destroy

- Later phases reveal the attacker's true intent

Diamond Model

Maps intrusion relationships

- Four points: Adversary, Victim, Capabilities, Infrastructure

Links who attacks whom
using what

- Shows where defenses can disrupt

Diamond Model of Intrusion Analysis

Source: Diamond Model of Intrusion Analysis — Caltagirone, Pendergast, Betz (2013)

MITRE ATT&CK

Knowledge base of real-world adversary behavior

- Categorizes by Tactics, Techniques, Procedures

Complements Kill Chain and Diamond Model

- Industry standard for threat classification
